Homework 1 - Steganography

Question:

The LSB encryption is a crisper image with little to no distortion compared to the MSB. The MSB encryption left the image with distorted pixels across the top. As the payload got bigger the amount of distorted pixels increased. With a long string the distortion could be seen easily. Since the payload was Kirk_Vasilas, it was hard to see on the very high resolution picture of the truck.

STEGO KEY = abcde
